

SMART WASTE MANAGEMENT SYSTEM FOR HARITHA KARMA SENA

Abstract

The Smart Waste Management System for Haritha Karma Sena is a web-based application developed using the Django framework. The main purpose of this project is to simplify the waste collection process by providing an online platform for citizens and Haritha Karma Sena members. Instead of relying on manual records and phone calls, citizens can submit waste collection requests online and track their request status.

The system consists of three modules: Citizen, Haritha Karma Sena Member, and Admin. Citizens can register, log in, submit waste collection requests, and view the request status. Haritha Karma Sena members can log in, view assigned collection requests, and update the collection status. The Admin manages users, collection requests, and system data using the Django Admin panel.

The application is developed using Python Django, HTML5, CSS3, Bootstrap 5, and SQLite. The system provides a simple and user-friendly platform for managing waste collection requests digitally and improving communication between citizens and Haritha Karma Sena members.

The proposed system helps reduce manual work, improves the waste collection process, and provides an organized method for managing collection requests. The project is practical, easy to implement, and suitable as an MCA Mini Project.
